

BROTHER GADGETS ERP — OFFICIAL GUIDE

Multi-Branch Management Guide

Complete reference for understanding branch data isolation, user access control, and how your ERP manages multiple outlets seamlessly.

VERSION	DATE	SYSTEM	TYPE
v1.0	August 2026	Brother Gadgets ERP	Internal Documentation

• CONTENTS

Table of Contents

This guide covers everything you need to know about managing multiple branches in Brother Gadgets ERP.

1	What is Branch Scoping?	3
2	How It Works — Architecture	3
3	Branch-Isolated Data (Separate per Branch)	4
4	Shared Data (Across All Branches)	5
5	User Roles & Branch Access	6
6	Stock Transfers Between Branches	7
7	Admin: Viewing All Branches	7
8	Quick Reference	8

Who should read this?

Shop owners, admins, managers, and any staff who need to understand how data is separated across multiple branches in the ERP system.

• SECTION 1

What is Branch Scoping?

Branch scoping means each branch of your shop sees only its own data. Sales, customers, employees, stock, and reports are completely separated per branch — just like running independent stores under one roof.

Short Answer

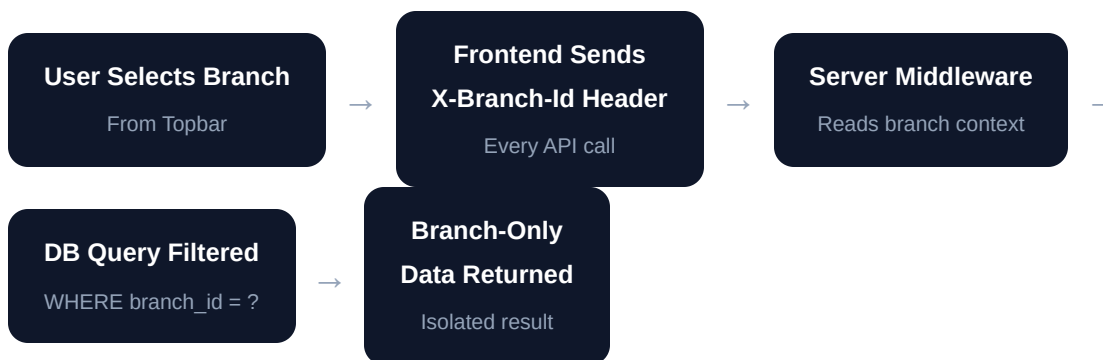

No, branch data is NOT shared.

Branch A's sales, customers, and employees will never appear in Branch B's view. Each branch operates in its own isolated data space.

Section 2 — How It Works

Every time a user logs in and selects a branch, the frontend sends a special header `X-Branch-Id` with every API request. The server then automatically filters all database queries to show only data belonging to that branch.

Data Flow

```
// Every database query automatically gets this filter applied:
SELECT * FROM transactions
  WHERE tenant_id = :tenantId
     AND branch_id = :selectedBranchId ← branch filter
     AND is_deleted = false
```

**Important for Admins**

If you select "All Outlets" from the topbar, the branch filter is removed and you'll see combined data from all branches. This is an Admin-only feature — regular staff always see only their assigned branch.

• SECTION 3

Branch-Isolated Data

The following modules are completely isolated per branch. Data created in one branch will never appear in another branch's view.

MODULE	WHAT'S ISOLATED	STATUS
 Sales / POS	All transactions, invoices, returns, payment records	✓ Isolated
 Purchases	Purchase orders, goods receipt, supplier returns	✓ Isolated
 Customers	Customer records, due balances, purchase history	✓ Isolated
 Expenses	Daily expenses, expense categories, totals	✓ Isolated
 Employees	Employee profiles, salaries, documents	✓ Isolated
 Attendance	Daily check-in/out records, today's status	✓ Isolated
 Payroll	Salary slips, payroll summaries, payment status	✓ Isolated
 Leave	Leave requests, approvals, leave summaries	✓ Isolated
 Repairs	Repair tickets, status updates, repair revenue	✓ Isolated
 Warranty	Warranty claims, claim history per IMEI	✓ Isolated
 IMEI Tracker	IMEI/serial units, inventory units per branch	✓ Isolated
 Wholesale Orders	Wholesale customer orders, pricing tiers	✓ Isolated
 Reports & Dashboard	All charts, stats, KPIs reflect selected branch only	✓ Isolated
 Accounting P&L	Profit & Loss, Journal Entries filtered by branch	✓ Isolated

MODULE	WHAT'S ISOLATED	STATUS
 Audit Logs	Action history — what happened in each branch	 Isolated

• SECTION 4

Shared Data (By Design)

Some data is intentionally shared across all branches because it makes sense for the whole business, not just one outlet.

MODULE	WHY IT'S SHARED	STATUS
 Products (Catalog)	Same product can be sold in any branch. Stock counts are tracked per-branch via IMEI units.	 Shared
 Suppliers	Your vendor directory is company-wide, not branch-specific	 Shared
 Roles & Permissions	Role definitions (Admin, Manager, Cashier) apply across the whole tenant	 Shared
 Settings	Shop name, logo, invoice template, tax settings — company-wide config	 Shared
 Investors / Loans	Business-level financial partnerships, not branch-specific	 Shared
 Notifications	Per-user, not per-branch	 Shared
 Document Vault	Linked to entities (employees, products), not branch-scoped	 Shared
 Chart of Accounts	Accounting structure (accounts list, balance sheet) is company-wide	 Shared
 Support Tickets	Sent to platform support team — not an internal branch concern	 Shared

Products vs. Stock — Important Distinction

The

product catalog

(name, price, description) is shared. But

stock/inventory

is branch-specific — each branch has its own IMEI units and the dashboard shows stock counts for the selected branch only.

• SECTION 5

User Roles & Branch Access

Different roles have different levels of access across branches. Here's exactly what each role can and cannot do.

**Admin**

- ✓ Can switch between any branch from topbar
- ✓ Can select "All Outlets" to see combined data
- ✓ Can create/manage all branches
- ✓ Can assign users to specific branches
- ✓ Has full access to every module
- ✓ Can view cross-branch audit logs

**Manager**

- ✓ Locked to their assigned branch
- ✓ Can manage sales, purchases, employees
- ✓ Can approve leaves & attendance
- ✓ Can view branch-specific reports
- ✓ Cannot switch to other branches
- ✓ Cannot see other branch data

**Cashier**

- ✓ Locked to their assigned branch
- ✓ Can create sales (POS)
- ✓ Can view customers & sales history
- ✓ Can process returns
- ✓ Limited report access
- ✓ Cannot see other branch data

**Staff / Technician**

- ✓ Locked to their assigned branch
- ✓ Access limited to assigned permissions
- ✓ Typically: repairs, IMEI lookup
- ✓ Cannot access finance modules
- ✓ Cannot see other branch data
- ✓ Read-only on most modules

Branch Assignment Rules

RULE	DETAILS
Admin switch	Only ADMIN role can switch branches from the topbar dropdown

RULE	DETAILS
Non-admin lock	Managers, Cashiers, Staff are hard-locked to their assigned branch on login
Branch assignment	Users are assigned to a branch by Admin during user creation or editing
Bypass prevention	Even if a non-admin user tries to send a different branch ID, the server ignores it
Multi-branch admin	Admin can set "All Outlets" to see aggregated data from all branches simultaneously

• SECTION 6

Stock Transfers Between Branches

Products and IMEI units can be transferred between branches using the Stock Transfer module. Both the sending and receiving branch can see the transfer record.

STEP	ACTION	WHO CAN DO IT
1. Initiate Transfer	Select product, quantity, source branch, destination branch	Admin, Manager
2. Status: PENDING	Transfer created — stock not yet moved	System
3. Approve & Ship	Source branch confirms dispatch	Admin, Manager (Source)
4. Receive Goods	Destination branch confirms receipt — stock updates automatically	Admin, Manager (Destination)
5. Status: COMPLETED	Inventory units updated; both branches see the completed record	System

Note on Visibility

A stock transfer record is visible to **both** the source and destination branch. This is intentional — both parties need to see the same transfer record to coordinate.

• SECTION 7

Admin: Viewing All Branches

As an Admin, you can see data from all branches simultaneously by selecting "All Outlets" from the branch selector in the topbar.

MODE	WHAT YOU SEE	BEST USED FOR
 Single Branch Selected	Only that branch's data across all modules	Daily operations, branch-specific reports
 All Outlets	Combined/aggregated data from all branches	Company-wide reports, overall business health

• SECTION 8

Quick Reference

A one-page summary you can print and keep at your desk.

QUESTION	ANSWER
Will Branch A see Branch B's sales?	 No — completely isolated
Can two branches share a customer?	 No — customers are branch-specific
Can the same product be in both branches?	 Yes — product catalog is shared; stock is separate
Can I move stock between branches?	 Yes — use Stock Transfer module
Can a cashier switch branches?	 No — only Admin can switch
Can Admin see all branches at once?	 Yes — select "All Outlets" in topbar
Are reports per-branch?	 Yes — dashboard shows selected branch data only
Are expenses separate per branch?	 Yes — each branch has its own expense records
Is payroll per-branch?	 Yes — employees and payroll are branch-specific
Are accounting reports per-branch?	 Yes — P&L and Journal Entries filter by branch
Are supplier lists shared?	 Shared — suppliers are company-wide
Are roles & permissions shared?	 Shared — role definitions apply tenant-wide

Summary in One Sentence

Each branch operates like an independent store — its own sales, customers, employees, stock, and financials — while sharing the same product catalog, supplier directory, and company settings under one ERP roof.
